07 October 2026	Gangadevi.R	Incident Life Cycle Automation

Data Flow Diagram

The diagram below shows the core flow of incident data between users, automation processes and the audit-ready incident store.

User Stories

User Type	Epic	Story No.	User Story / Task	Acceptance Criteria	Priority	Release
Reporter / End User	Incident Intake	US-01	As a reporter, I can submit an incident with the required details so that it can enter the lifecycle.	A unique incident ID is created and the incident is visible in New / Logged state.	High	Sprint 1
Reporter / End User	Status Tracking	US-02	As a reporter, I can view the current incident status and owner so that I know what is happening.	Current status, owner and last update are visible.	High	Sprint 2
Support Engineer	Assignment	US-03	As a support engineer, I can see incidents assigned to me so that I can act on them.	Assigned queue is filtered to the user and key incident details are shown.	High	Sprint 1
Support Engineer	Investigation	US-04	As a support engineer, I can update an incident with work notes and evidence.	Authorized update is timestamped and added to lifecycle history.	High	Sprint 2
Support Engineer	Resolution	US-05	As a support engineer, I can record a resolution summary so that the incident can move to resolved.	Resolution details are mandatory before Resolved status.	High	Sprint 2
Incident Manager	Triage	US-06	As an incident manager, I can set or review category, impact, urgency and priority.	Priority is visible and changes are recorded.	High	Sprint 1
Incident Manager	Routing	US-07	As an incident manager, I can assign or reassign an incident to the correct owner/queue.	Ownership changes are reflected immediately and audited.	High	Sprint 1
Incident Manager	SLA & Escalation	US-08	As an incident manager, I can monitor SLA due times and receive escalation alerts.	At-risk and breached incidents are clearly identified and notifications are generated.	High	Sprint 2

User Type	Epic	Story No.	User Story / Task	Acceptance Criteria	Priority	Release
Administrator	Rules	US-09	As an administrator, I can configure routing and SLA rules used by the automation.	Rules can be created/updated by authorized users and are applied to new incidents.	Medium	Sprint 3
Administrator / Auditor	Audit	US-10	As an auditor, I can review the incident history so that lifecycle decisions are traceable.	History shows who changed what and when.	Medium	Sprint 3
All Authorized Users	Search & Dashboard	US-11	As an authorized user, I can search and filter incidents by status, priority, owner and date.	Results reflect selected filters and can be opened for details.	Medium	Sprint 3
System	Notification	US-12	As the system, I can notify relevant users when ownership, status or SLA state changes.	Notification event is generated with incident ID and action summary.	Medium	Sprint 3
