

Solution Requirements

Functional & non-functional requirements for the incident automation platform

DATE	STUDENT NAME	PROJECT
07 October 2026	Gangadevi.R	Incident Life Cycle Automation

Functional Requirements

FR No.	Epic	Requirement
FR-01	Incident Intake	Create an incident with title, description, source, category, impact, urgency and timestamp.
FR-02	Incident ID & Status	Generate a unique incident ID and initialize lifecycle status.
FR-03	Classification & Priority	Assign category and priority from captured impact/urgency and configurable rules.
FR-04	Assignment	Route incidents to the appropriate queue/owner and record ownership.
FR-05	SLA Tracking	Start the applicable SLA clock and show due time / breach state.
FR-06	Notification & Escalation	Send status/assignment alerts and escalate incidents approaching or crossing SLA thresholds.
FR-07	Investigation Updates	Allow authorized users to add work notes, evidence and status updates.
FR-08	Resolution	Record resolution summary, resolution time and supporting details.
FR-09	Closure	Allow closure after resolution validation / confirmation and preserve final state.
FR-10	Lifecycle History	Maintain a chronological history of status, owner, priority and key actions.
FR-11	Dashboard & Search	View open, overdue, assigned and closed incidents with filters and search.
FR-12	Role-based Access	Restrict actions and data views according to user role.
FR-13	Auditability	Capture key changes for traceability.

Non-Functional Requirements

NFR No.	Quality Attribute	Description
NFR-01	Usability	Common incident actions should be understandable without extensive training.
NFR-02	Security	Use authenticated access, role-based authorization and secure handling of incident data.
NFR-03	Reliability	Lifecycle updates and audit events should remain consistent when an operation succeeds.
NFR-04	Performance	Common views and incident actions should respond within an acceptable interactive delay under expected project load.
NFR-05	Availability	The application should be deployable so users can access the incident workflow whenever the operating environment is available.
NFR-06	Maintainability	Business rules such as priority, routing and SLA thresholds should be easy to update.
NFR-07	Auditability	Lifecycle transitions and key changes should be traceable by user, time and action.
