

Brainstorm & Idea Prioritization Template

Generate practical ideas, then focus the build on the highest-value automation

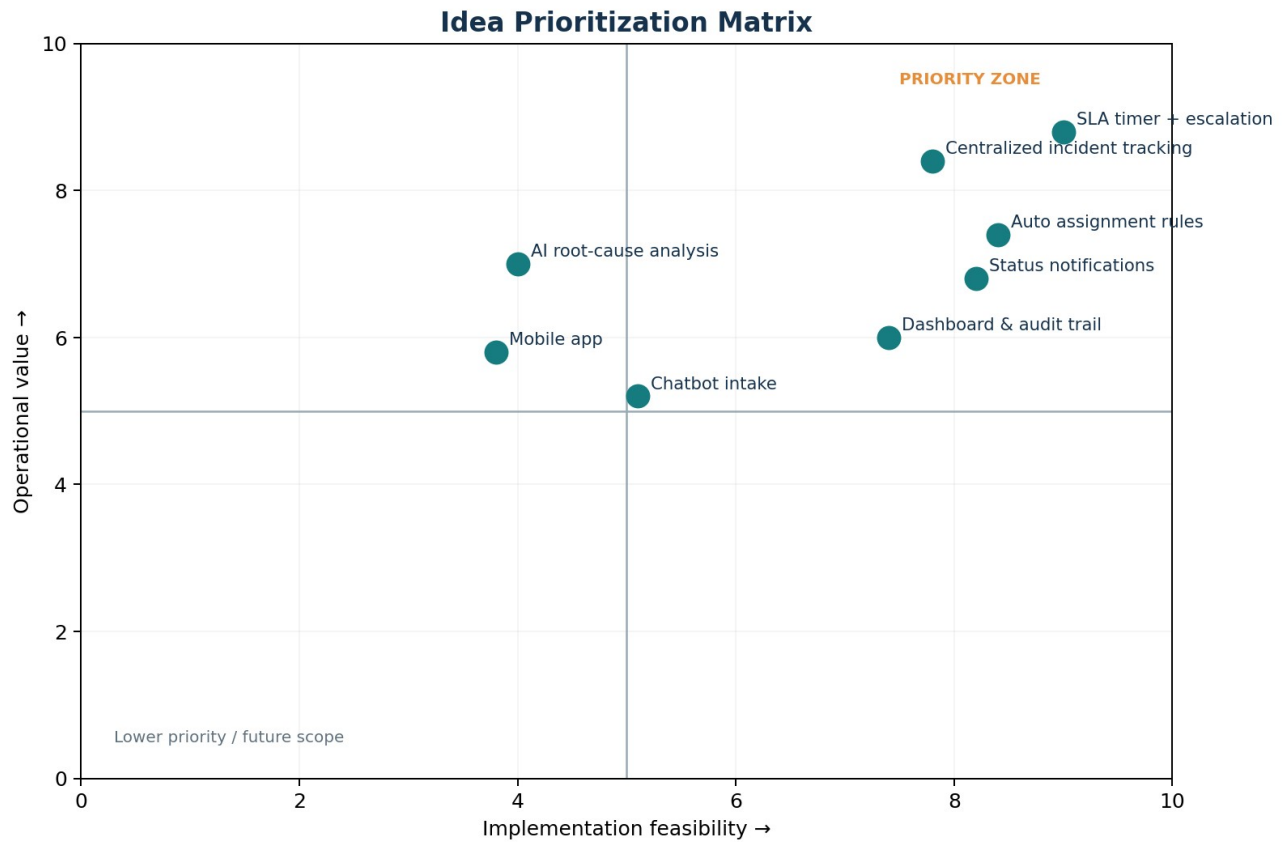

DATE	STUDENT NAME	PROJECT
07 October 2026	Gangadevi.R	Incident Life Cycle Automation

Step 1 - Selected problem

How might we automate the incident lifecycle so that each incident is captured, prioritized, owned, tracked against SLA, escalated when necessary, and closed with a complete audit trail?

Step 2 - Idea generation & grouping

Theme	Ideas
Intake	Structured incident form; automatic incident ID; mandatory fields; source tagging
Triage	Category rules; priority rules; duplicate check; impact/urgency capture
Assignment	Rule-based routing; owner acknowledgement; reassignment
SLA	SLA timer; due-time indicator; breach detection; escalation notification
Resolution	Resolution notes; evidence/attachments; requester confirmation
Visibility	Role-based dashboard; status filters; open/overdue views; audit history

Step 3 - Prioritized build scope

- P1 - Core: incident intake, lifecycle status, priority, assignment, SLA timer, escalation, resolution and closure.
- P2 - Operational visibility: dashboards, filters, audit history and basic reporting.
