

Empathy Map Canvas

Empathize & Discover - understanding the people who report, manage and resolve incidents

DATE	STUDENT NAME	PROJECT
07 October 2026	Gangadevi.R	Incident Life Cycle Automation

1. Target users

The primary users are reporters/end users, support engineers, incident managers and administrators/auditors, each needing faster hand-off, visibility, control and traceability.

2. Empathy map

Dimension	Project Insight
SAYS	“I need to report this quickly.” “Who is handling my incident?” “Has the SLA been crossed?”
THINKS	The incident may be urgent. Manual updates can be missed. I need trustworthy status information.
DOES	Reports incidents. Checks status. Adds updates/evidence. Reassigns or escalates when needed.
FEELS	Frustrated when incidents are lost. Anxious when response is slow. Confident when ownership and status are clear.

3. Pains

- Incidents can be logged through inconsistent channels or with incomplete details.
 - Manual assignment and follow-up can delay response.
 - SLA breaches may be noticed too late.
 - Status history and audit evidence may be fragmented.
- Gains: single source of truth; automatic routing and escalation; clear ownership and status; audit-ready lifecycle history.
